

Mid Lab exam

CSE-232

Intake-44, sec-07

1. Write a user defined function named `b_s()` that receives a character array and search an element from the array using binary search technique.
2. Write a user defined function named `r_s()` that receives a text, a `pattern1` and `pattern2`. If the text contains that `pattern1` more than one times, `pattern1` is always replaced by `pattern2`.
